<b>Subject:</b>	Create sniff for function / method doc comment long types		
<b>Description</b>			
<p>In the cgl there is a doc block comment example</p> <pre>/**  * Initializes the plugin.  *  * Checks the configuration and substitutes defaults for missing values.  *  * @param array \$conf Plugin configuration from TypoScript  * @return boolean TRUE if initialization was successful, FALSE otherwise  * @see tx_myext_class:anotherFunc()  */ protected function initialize(array \$conf) {     // Do something }</pre> <p>In this example the long types are used (boolean instead of bool).</p> <p>It must be discussed if the long types are mandatory or it if free to the developer.</p> <p>Lets create a ticket at the cgl forge project. After this we can determine if there must be a sniff :)</p>
