

TYPO3.Fluid - Bug # 38871

Status:	Closed	Priority:	Should have
Author:	Jost Baron	Category:	ViewHelpers
Created:	2012-07-11	Assigned To:	
Updated:	2013-02-01	Due date:	
Has patch:	No		
Affected Flow version:	(any)		
Subject:	Generating links within script tags gives invalid documents		
Description			
<p>When generating a link in a fluid template, which is enclosed by script-Tags to a given format, the ampersands are not escaped.</p> <p>So</p> <pre><script type="text/javascript"> var link = '{f:uri.action(action: 'someAction')}'; </script></pre> <p>generates a link like this:</p> <pre>index.php?id=123&tx_ext_pi1[controller]=SomeController&tx_ext_pi1[action]=someAction&cHash=foobar</pre> <p>This is invalid XHTML (even inside a script, according to the W3C-Validator), as the ampersands are literals. The same thing works fine outside of script tags.</p>

Jost,

I just tried in in Flow context and it doesn't encode the ampersands since it's not necessary in plain HTML (non-xhtml). If you need to encode the ampersand anyways, add the `format.htmlentities` ViewHelper just like this:

```
{f:uri.action(action: 'someAction') -> f.format.htmlentities()}}
```

Don't hesitate to reopen if you don't agree or if extbase is still affected with it.
