

TYPO3.SwiftMailer - Bug # 38915

Status:	New	Priority:	Should have
Author:	Philipp Metzler	Category:	
Created:	2012-07-12	Assigned To:	
Updated:	2012-07-12	Due date:	
Subject:	Error messages are not verbose		
Description			
<p>If swiftmailer can't read a file in the function <code>_getReadHandle</code> in <code>typo3/contrib/swiftmailer/classes/Swift/ByteStream/FileByteStream.php</code> it will present this error message to the user:</p> <p>"Unable to open file for reading [FILENAME]"</p> <p>If you have turned <code>allow_url_fopen</code> OFF PHP returns such errors:</p> <p>Warning: <code>fopen()</code> [function.fopen]: URL file-access is disabled in the server configuration in XYZ on line 3</p> <p>so the PHP error message is more verbose and tells the user exactly where he should look. TYPO3 could generally check the environment and warn the user that certain features won't work without the necessary PHP.INI settings.</p> <p>see also postings:</p> <p>http://forge.typo3.org/issues/38907</p> <p>and</p> <p>http://bugs.typo3.org/view.php?id=12199</p>
