

TYPO3.Party - Bug # 39150

Status:	Closed	Priority:	Must have
Author:	Steffen Wickham	Category:	Validation
Created:	2012-07-21	Assigned To:	
Updated:	2013-05-03	Due date:	
Affected Flow version: FLOW3 1.1.0 rc 2			
Subject: Missing validators for all type values of ElectronicAddress			
Description			
<p>The ElectronicAddress model of TYPO3.Party tries to validate all kind of address values during execution. Due to missing validators, there will be an error message (no exception!) on a blank white page.</p> <p>There are missing validators for electronic addresses as follows:</p> <ul style="list-style-type: none">- Skype- Aim- Gizmo- Icq- Jabber (could be derived from EmailAddressValidator)- Msn- Sip- Url <p>and</p> <ul style="list-style-type: none">- Yahoo <p>Using user defined validators in non framework packages would be ignored due to model validation restriction. For type attribute there are only alphanumeric value allowed so specifying vendor names and packages (Vendor\Package:Validator, i.e. MyCompany\MyPackage:Skype) wouldn't be possible.</p> <p>But even when alphanumeric validator is removed from model, there will be an other error showing up: Object expected, string given. As far as I know, it's thrown by \TYPO3\FLOW3\Validation\Validator\GenericObjectValidator->validate().</p>

Revision a69dd902 - 2013-03-01 15:19 - Karsten Dambekalns

[TASK] Add missing validators for ElectronicAddress types

Adds the needed validators and changes the ElectronicAddressValidator so that it uses them.

Change-Id: If9ac540584816775ee56933b432d93cd20e0702d

Fixes: #39150

Releases: master

#2 - 2012-07-25 12:03 - Karsten Dambekalns

- Project changed from *TYPO3.Flow* to *TYPO3.Party*

#3 - 2012-07-25 12:04 - Karsten Dambekalns

- Category set to Validation

#4 - 2012-07-25 19:01 - Karsten Dambekalns

- Status changed from New to Accepted

- Assigned To set to Karsten Dambekalns

#5 - 2012-07-25 19:09 - Gerrit Code Review

- Status changed from Accepted to Under Review

Patch set 1 for branch **master** has been pushed to the review server.

It is available at <http://review.typo3.org/13048>

#6 - 2012-07-25 19:14 - Karsten Dambekalns

- Status changed from Under Review to Needs Feedback

- Target version set to 1.1.1

Pushed a change that shows how it should work. Now the task would be to find out the rules for the various types and add validators as well as tests for all that.

Feel free to contribute!

- File *Skype_and_Url_Validator.patch* added

I've modified your source code in *SkypeAddressValidator.php* a bit to match a really valid skype address. Skype help restricts usernames to characters and numbers but allows period and minus as valid characters too. Skype suggests usernames with period also.

I've added a validator for url's, too. It allows all kinds of http, https and ftp addresses with or without authentication credentials, domains, public accessible ip addresses (private blocks like 192.168.*.*, 10.*.*.* and so on are not allowed like in rfc suggested) and unicode characters like chinese characters in url. It is based on the "winning" regex from <http://mathiasbynens.be/demo/url-regex>.

SIP Validator will be committed tomorrow. Sorry for applying a patch but I've got some troubles with my git setup atm.

- File *SkypeAddressValidator.php* added

Sorry, messed up the patch file. I really need more sleep...

You can find the modified version of *SkypeAddressValidator.php* attached.
