TYPO3.Fluid - Bug # 39428

Status:	Resolved	**Priority:**	Must have
Author:	Alexander Berl	**Category:**	Core
Created:	2012-07-31	**Assigned To:**	Alexander Berl
Updated:	2014-08-27	**Due date:**	
Has patch:	No		
Affected Flow version:	FLOW3 1.1.0 rc 2		
Subject:	Layout and partial identifiers should be independent of current controller name		

Description

Currently, all templates get an identifier made up of package/subpackage, controller, prefix and unique hash.
This leads to all layouts and partials being compiled and cached once for each controller they are used from, even though the contents is independant and hence just a duplicate.

I suggest adding the controller name as part of the prefix in getTemplateIdentifier() only and stripping it from createIdentifierForFile().

Revision b474d245 - 2014-08-25 11:43 - Alexander Berl

[BUGFIX] Resolve duplicate layout and partial compilations

Layouts and partials are independent of the current controller and hence should
not have the controller name in their identifier to prevent duplicate
compilations and cache instances of the same content.
This change removes the controller name from identifiers of layouts and
partials, but leaves the identifier of templates untouched.
