Subject:	Clarify introducing properties		

Description

When you have an aspect to introduce a property, it's not clear this is not possible without any other advice in the same aspect.

The actual error:

Uncaught Exception
  The class "Test\Aspect\ModelAspect" is tagged to be an aspect but doesn't
  contain advices nor pointcut or introduction declarations.

Which seems incorrect for the developer as he introduced a property. Either this error should be clarified, or it should be possible to introduce just a property (last one doesn't sound really like a usecase as you would expect changed behavior if a new property is added, so in a common usecase you would have at least 1 advise).

This part should also be clarified more in documentation
