- Status changed from New to Needs Feedback

Hmm, I cannot reproduce this error on Mac OSX with Apache 2 and APC.

Does this error appear every time? Even after you cleared the FLOW3 caches (files in Data/Temporary/) and the APC opcode cache?

Hi Dmitry, any feedback?

#3 - 2009-09-22 13:03 - Irene Höppner

I don't know, if this is relevant in this case, but the php-download-page (<http://windows.php.net/download/>) says:

If you are using PHP with Apache 1 or **Apache2** from apache.org you need to use the **VC6** versions of PHP.

If you are using PHP with **IIS** you should use the **VC9** versions of PHP.

- Status changed from Needs Feedback to Closed

I'd suspect this was an issue with APC and/or PHP. Closing this - feel free to reopen if needed.
