Subject:	Implement a way to inline-document planned TypoScript extension points		
Description			
<p>through TypoScript, basically everything can be extended, which is unplanned extensibility. However, we have defined extension points where we as core team are responsible for that they also work in the future, f.e. are not renamed for a certain amount of time (planned extensibility)</p> <p>We need some lightweight inline-documentation format for that, maybe even using Inline-ReST.</p>
