

Core - Bug # 39798

Status: Accepted	Priority: Must have
Author: Mario Rimann	Category: Backend API
Created: 2012-08-14	Assigned To:
Updated: 2015-01-23	Due date:
TYPO3 Version: 6.0	
PHP Version:	
Complexity: hard	
Is Regression: No	
Sprint Focus:	
Subject: Language changes on re-ordering of Content Elements	
Description	
If content elements on a page are moved up and down in the order, they get the sys_language_uid assigned of the record that they jumped over.	
Steps to reproduce:	
<ol style="list-style-type: none">1. go to the list module (extended view + localization view active)2. create a page3. add a content element, name it "foo" and assign it the language "all languages"4. add a second content element, name it "bar" and leave it on language "default"	
The list now looks like this:	
- foo - all languages - bar - default	
Now click the arrow down, to move "foo" down after "bar". Expected result is that only the order changes. But now, the order changes AND the language "default" will also be set for "bar", resulting in the following list:	
- foo - default - bar - default	
Notes:	
- Disabling the Localization View has no effect -> bug is reproducible independent of that checkbox - Same mistake happens in the Page Module

Thanks for the report, Mario. Can you reproduce this with older TYPO3 versions?

I did not explicitly test it today in older versions, but my colleague who found this issue in a customer project is working in a 4.5.x environment - so I'm pretty sure it's also reproducible in 4.5.x and up to master (tested with a 6.0-dev today).

Hi!

Can you please check whether there is a hook registered for:

```
$GLOBALS['TYPO3_CONF_VARS']['SC_OPTIONS']['t3lib/class.t3lib_tceMain.php']['moveRecordClass']
```

You can use the Configuration module in the BE for checking that.

Thx.

```
$GLOBALS['TYPO3_CONF_VARS']['SC_OPTIONS']['t3lib/class.t3lib_tceMain.php']['moveRecordClass']
```

On the installation where this was reported, the "multicolumn" extension is installed, which adds itself to exactly this hook. So I went to test it on another 4.5.x based setup, where multicolumn is **not** installed. So the only thing that is hooked into the mentioned hook (in both installations) is:

```
EXT:cms/t3lib/hooks/class.tx_cms_treelistCacheUpdate.php:&tx_cms_treelistCacheUpdate
```

The issue is reproducible also in this setup with only this hook in place.

I just tried to reproduce this as an editor user on a TYPO3 v6.1.5 installation -> error appears also in this situation.

#7 - 2013-11-18 11:05 - Markus Klein

- Category set to Backend API
- Status changed from New to Accepted
- Priority changed from Should have to Must have
- Target version set to next-patchlevel
- Complexity set to hard
- Is Regression set to No

I can reproduce this on current master (6.2) too. Strangely this only happens when moving things "down"!

#8 - 2015-01-23 15:25 - Mathias Schreiber

- Target version changed from next-patchlevel to 7.4 (Backend)
