Has patch:	Yes		
Complexity:			
Subject:	Improve HTML backtrace for boolean and array arguments		
Description			
<p>currently, a function call in the backtrace makes some type hints about the passed arguments. For boolean and array types, it's still boolean and array.</p> <p>This should be replaced with TRUE/FALSE and, as a suggestion, array 13 giving an insight about the fact that the array has 13 elements containing; or array 0 for example, which would be especially helpful.</p>

[FEATURE] Improved argument type watch in HTML debug backtrace

In the debug backtrace of method calls, this gives concrete information about the actual argument values in case of being boolean; and reveals the amount of array elements, if such.

An array is now presented as `array|2|` for example, if it has two elements.

Boolean values are not longer only displayed as `boolean`, but as their concrete TRUE or FALSE value accordingly. Since the color scheme stays the same, it can still easily be distinguished from string values.
