Sprint Focus:			
Subject:	Local file not editable (as admin) - User right 'edit' vs. 'update'		
Description			
<p>When editing a local file (as admin user without any rights set up), there is a mismatch between the granted defaults and the checked permission. This results in an exception when trying to save a text file.</p> <p>In t3lib_file_Storage the permission to 'update' is checked</p> <pre>public function setFileContents(t3lib_file_AbstractFile \$file, \$contents) { // Check if user is allowed to update if (!\$this->checkUserActionPermission('update', 'File')) { throw new t3lib_file_exception_InsufficientUserPermissionsException('Updating file "' . \$file->getIdentifier() . '" not allowed for user.', 1330121117); } }</pre> <p>But the default permissions in t3lib_beUserAuth->getFilePermissions do not include 'update', only 'edit'</p> <pre>if (!isset(\$this->filePermissions)) { \$defaultOptions = array('addFile' => TRUE, // new option 'readFile' => TRUE, // new option, generic check of the user rights 'editFile' => TRUE, // new option 'writeFile' => TRUE, // new option, generic check of the user rights 'uploadFile' => TRUE, 'copyFile' => TRUE, 'moveFile' => TRUE, 'renameFile' => TRUE, 'unzipFile' => TRUE, 'removeFile' => TRUE, 'addFolder' => TRUE, 'browseFolder' => TRUE, // new option,, generic check of the user rights 'moveFolder' => TRUE, 'renameFolder' => TRUE, 'writeFolder' => TRUE, // new option, generic check of the user rights 'removeFolder' => TRUE, 'removeSubfolders' => TRUE // was "delete recursively" previously); }</pre>

Revision cfd10726 - 2012-09-16 16:02 - Andreas Wolf

[BUGFIX] Files contents cannot be changed

Setting file contents failed for two reasons:

a) The permissions were incorrectly read from TSconfig and

b) We used a new "update" permission that was not present in the default configuration, so without manually setting it, a file could never be updated, even by admins.

This commit changes the "update" permission back to "edit", which was also used in the pre-FAL era.
