[BUGFIX] Test dependency to autoloader tests

The new class_alias() mapping in the autoloader makes the autoloader
behave weird if it is unregistered and registered multiple times during
one call. This is the case in unit tests and can lead to fatals in other
tests. For now, it is checked if the autoloader already loaded the class
alias map to no redo this and the internal mapping is not overwritten.

[BUGFIX] Merge t3lib_exec class with t3lib_utility_Command

After namespace change both classes t3lib_utility_Command t3lib_exec
are mapped to the new class TYPO3\CMS\Core\Utility\CommandUtility

This patch adds missing t3lib_exec content to CommandUtility.

Mapping old classes names to new one is already done for both classes.

[TASK] Remove compat layer for new 6.0 classes - 2

Remove the name space compatibility layer for new 6.0 classes in
t3lib/. This second patch finishes the work started with #40240
and removes the compatibly layer for the log API, and the new
configuration and rootline handling.
All class occurences that still referenced the old class names
in method headers and comments are adapted.

[TASK] Namespace and move t3lib unit tests - 1

This patch moves most unit tests of the tests/Unit/t3lib/ main
directory. They follow the new class names of the classes under
test and are namespaced. Covered are files that belong to the
backend and core extension.
The travis test configuration is adapted to execute tests
located in those extension folders.

[BUGFIX] Fatal errors for interfaces with PHP version < 5.3.7

This bugfix rewrites function type hints to match the new ones as long as
PHP versions of OS Venders are not up to date.
Fatal errors are thrown when using an old interface with the new
TYPO3 6.0 beta 1. This only happens with PHP versions below 5.3.7 as

there are some type hinting issues.

Raise the Extbase submodule pointer at the same time to be in line
with the renaming of the Autoloader to ClassLoader.

[BUGFIX] Release scheduler from classname field

Currently the scheduler depends at many parts on its classname field in
the tx_scheduler_task table. This is not necessary as the classname is
already stored in the serialized task object. By releasing scheduler

by the class_alias mechanism.
