History

#1 - 2012-09-04 11:56 - Robert Lemke

- Target version set to Sprint 10 (1.0 TP1)
- Position deleted (1)
- Position set to 3

#2 - 2012-09-04 12:06 - Robert Lemke

- Category set to Content Editing

The procedure to create a new page through the page tree (in Content Editing View) changes: instead of using drag and drop to pull a new page into the page tree, we use a select-and-create approach. The workflow is as follows:

- open the page tree
- the current page is selected
- on top of the page tree there is a toolbar with action icons (aligned to right). At this stage we only have one action icon, namely a plus sign
- click the plus icon
- a new page is created in the page tree *below* the current page (the new page is a sub page of the current page)
- if pages already existed below the current page, the new page is set to be the last of these sub pages
- if the level below the current page has been collapsed, it now is expanded
- the new page is in edit mode: the cursors blinks and the user can now enter a title
- only after the edit field loses context (that is, by pressing enter or clicking elsewhere), the new page is actually created

Further notes:

- if a new page has just been created but is still in edit mode, it is *not* the "current" page yet - that happens after the new page has been created (see above)

Multiple pages:

- if a new page is in edit mode and has not been created, another page can be created by clicking the plus sign again
- in that case, the new page (#1) loses focus and another page (#2) is created below page #1 because the parent page *stays the "current" page*

Note: this pretty much behaves like the folder creation in the web interface of iCloud Mail
