Subject:	[DISCUSS] As a user, I want to return to the last-used submodule when changing between main modules		
Description			
Definition of Done:			
<ul style="list-style-type: none">- when clicking on the main module titles in the menu, the last-used submodule should be opened.- we do not want a separate redirect for that- there should be no side-effect across browser tabs (i.e. two tabs should not influence each other)- the module overview can always be accessed through a special icon-link in the submenu ("tile-image")			
Technical Details:			
<ul style="list-style-type: none">- we give every browser window/tab an ID using window.name- based on the browser window/tab and main module identifier, we store the last-visited module pages in local storage- we intercept the main module links and replace them using JS
