Description			

When cutting and pasting, an Error occurs, saying

> *[06-Sep-2012 06:05:43 UTC] PHP Fatal error: Call to undefined method TYPO3\TYPO3CR\Domain\Model\ProxyNode::setPath() in*
>
> *C:\Users\afoeder\PhpstormProjects\Edsh\edsh.de\Data\Temporary\Development\Cache\Code\FLOW3_Object_Classes\TYPO3_TYPO3C*
> *YPO3CR_Domain_Model_Node_Original.php on line 222*

The loop on the mentioned line seems to unintendedly get a ProxyNode instead of a "plain" node.

May this (again) be due to a "went inconsistent" persisted nodes state?

Revision 7a8f6c9d - 2012-09-06 15:58 - Aske Ertmann

[BUGFIX] Make setPath public again for proxy node compatibility

The method setPath was changed to protected in I59f27620873400045ca3fac1bb7918a224665671

and automatically called from construct, but this leads to issues when setting the path

on a proxy node which already exists
