Revision 8ece7498 - 2013-03-21 16:00 - Karsten Dambekalns

[BUGFIX] Undefined index breaks logger setup in Production

With I6da4763fb94798b1d1647b6108457996a48aa128 the logger used for the system log was made configurable. In Production context, when cached

settings are used, this breaks after an update - and even --force with a cache flush does not help.

This change adds a safeguard against the settings not being there.
