<b>Subject:</b>	Fatal error due to changes in SpriteHandler in TYPO3 6.0		
<b>Description</b>			
In the current TYPO3 master, feeditadvanced (current trunk) exits with a PHP fatal error, since the interface of the t3lib_SpriteManager class (now named \TYPO3\CMS\Backend\Sprite\SpriteManager) has changed.

The attached patch should fix this problem.

**#2 - 2012-09-09 17:28 - Lorenz Ulrich**

This is a core issue; the namespaces introduction is not yet compatible to PHP < 5.3.7 when dealing with interfaces. It doesn't make sense to solve that in each extension.

- File 40773-patch2.diff added

Hi Lorenz,

thanks for your feedback. in my opinion however, this is not just a namespace issue.

In TYPO3 < 6.0, the t3lib\_SpriteManager constructor accepts one argument, while in TYPO3 6.0 it does not accept any arguments. Furthermore, in 6.0 the method loadCacheFile is not present anymore. Since both methods are called within the ajax service, this would result in a fatal error regardless of namespacing.

Btw, I noticed that my previous patch contained a syntax error (sorry for that, updated version attached).

Best regards,  
Martin
