Base Distribution - Task # 40852

Story # 40628 (Closed): As any user, I need a Content Module based on semantic technologies (IKS)

Status:	Closed	**Priority:**	Should have

Subject:	Button-Bar should be positioned using jQuery UI position		

Description

Currently the handles to add/delete/move content are displayed manually inside ui/elements/contentelement-handles.js around line 61.

However, this seems to break depending on the site's CSS quite often (for example on the flow3.org website).

Thus, we want to replace the manual positioning with using jQuery UI position helper: http://jqueryui.com/demos/position/#events

Bonus: If possible make the handles appear only when the content element is active, and not on hover. This should make the UI more visually "stable".

Revision fb3ec69f - 2012-09-18 11:32 - Mattias Nilsson

[FEATURE] Button-Bar should be positioned reliably

We removed the old positioning of the button-bar; and after trying out jQuery UI
we found a CSS-only solution.

Additionally, the button-bar is correctly positioned inside sections; only
being visible when the section was selected or it is empty.

An active section is also outlined correctly with a border now.

This solution has been tested with Chrome and Firefox, for each of these sites:

  - Old Demo site
  - flow3.org site
  - WIP demo site

Currently, they are just manually positioned (see ui/elements/contentelement-handles.js around line 61). However, that is prone to errors and often breaks the positioning.

We'd like to use jQuery UI Position widget for that, as that's hopefully more robust.
