PHP Version:			
Has patch:			
Complexity:			
Subject:	Check maximum allowed path length only when creating of cache files failed		
Description	<p>Currently we're checking the length of each cache file that is generated in the caching FileBackend.</p> <p>It might be possible to do that check only if touch() returned FALSE to avoid the (small) performance loss due to the many strlen() calls.</p> <p>This has to be tested and profiled.</p>

There seems to be no way to catch the Warning that PHP's touch() command evokes if the file could not be created.. So this is not easily fixable.
