Complexity:	easy
Subject:	Autoloader in ClassReflection is not unregistered if reached

Description

The autoloader in ClassReflection that throws an exception if reached - indicating that a file could not be properly loaded for reflection - and thereby avoiding a fatal error, does not get unregistered if the situation occurs. Leaving the autoloader hanging. This causes trouble if fx. a class_exists call is made for an non-existing class.

Revision dfc34e54 - 2012-09-18 10:29 - Christian Jul Jensen

[BUGFIX] Make sure autoloader is always unregistered

ClassReflection adds an autoloader to catch cases of unresolved

classes. This autoloader needs to be unregistered reliably after

use.
