[TASK] Adjustments to TypoScript namespaces support

This adjusts the TypoScript service to set a default TypoScript
namespace.

[!!!][FEATURE] Namespaces support for TypoScript object types

This properly introduces namespaces support for TypoScript object types
and removes support for custom namespaces for processors.

The "namespace" declaration in a TypoScript template is now exclusively
declaring namespaces for TypoScript objects (not for processors).
Contrary to its earlier behavior, it expects a package key (by
convention) which corresponds to a namespace used in the prototype
definition elsewhere. PHP namespaces are not valid and any string
containing characters other than "a-z A-Z 0-9 ." will be rejected.

Namespace expansion is also supported in prototype definitions, thus
prototype(cms:Foo).@class … will be expanded to the correct namespace
if the namespace "cmd" has been declared elsewhere.

#2 - 2012-09-17 15:40 - Robert Lemke

- Category set to Content Rendering

Currently namespaces are (kind of) supported for processors and partly for TypoScript object types.

To do:

- remove feature for namespace declarations for processors – for now only one hardcoded processor namespace is supported
- implement and document namespace support for TypoScript object types so that it's possible to declare custom and default namespaces

    namespace: default=TYPO3.TYPO3
    namespace: foo=Acme.Demo

    page = Page
    ...

    myObject = foo:Bar
