Revision b811e147 - 2012-09-24 11:28 - Christian Jul Jensen

[TASK] Handle exceptions thrown in ClassReflection

When a class cannot be loaded for reflection, it will be ignored and a message is logged.

This makes sure that classes that are never used do not break the system. If they are indeed used later, things will still break, but even at a more

helpful position.

Revision 4179179d - 2012-09-26 12:01 - Karsten Dambekalns

[TASK] Tweak install script behavior, add (example) configuration

With this change the composer post install/update script will discern between "Essentials", being files that will always be copied - even if they already exist in their target location - and "Defaults", being files that will be copied only if not already existing.

This is used to add the example configuration files as essentials and a Routes.yaml as default.
