TYPO3.Neos - Task # 41335

Story # 41152 (New): As a content editor, I want to use a page tree which fits into the overall UI

Status:	Closed	**Priority:**	Could have

Updated:	2014-10-04	**Due date:**	
Subject:	Keyboard Navigation for the pagetree		

Description

In my opinion it would be nice to navigate the pagetree with the Cursors.

up -> up on the same level, or going up a level
down -> like up
left -> go to parent node and collapse
right -> go down to the next parent node and expand

with https://review.typo3.org/#/c/14876/
and https://review.typo3.org/#/c/14680/

'esc' and 'enter' work already for editing a pagetitle

History

#1 - 2012-10-12 12:07 - Markus Goldbeck

- Target version set to Sprint February 2013

- Parent task set to #41152

#2 - 2013-01-29 17:27 - Patrick Broens

Keep WAI-ARIA (Accessibility) in mind. There are only a few best practices for the page tree. Don't confuse this with the WAI-ARIA tree widget.

  - Up: Select the previous visible tree item.
  - Down: Select next visible tree item.
  - Left: Collapse the currently selected parent node if it is expanded. Move to the previous parent node (if possible) when the current parent node is collapsed.
  - Right: Expand the currently selected parent node and move to the first child list item.
  - Enter: Select the current node (Go to URL)
  - Space: Select the current node (Go to URL)
  - Home: Select the root parent node of the tree.
  - End: Select the last visible node of the tree.
  - Tab: Navigate away from tree. Important! (Normally when using tab it will focus on the next anchor in the following node)
  - (asterisk on the numpad): Expand all group nodes.

Double-clicking on a parent node will toggle its expanded or collapsed state.

An example can be found on

#3 - 2014-10-04 17:33 - Sebastian Helzle

- Status changed from New to Closed

- % Done changed from 0 to 100

This was done in 1.0.

If you still think this is an issue please open a ticket on jira.typo3.org
