Sprint Focus:			
Subject:	Scheduler doesn't show additional fields when creating new task		
Description			
Because the fully namespaced class name (with prefix) is used as class attribute of the block with additional fields and these class names contain backslashes, they are not suitable as values in HTML attributes.			
Replacing the backslashes with dashes solves the problem.

[BUGFIX] Make additional fields visible again in Scheduler

Namespaced class names contain backslashes and are not suitable for use in HTML attributes. Converting them to lowercase and replacing the backslashes with dashes makes the additional fields for scheduler tasks visible again when creating a new task.
