

TYPO3 Flow Base Distribution - Bug # 41525

Status:	Closed	Priority:	Should have
Author:	Martin Ebeling	Category:	
Created:	2012-10-02	Assigned To:	Christian Müller
Updated:	2012-12-17	Due date:	

Affected Flow version: FLOW3 1.1.0

Subject: Fields Validated in Controller not highlightet, just Error shown

Description

Fields are not highlighted if Validation is at ControllerAction like

```
/**
```

- @param string \$name
- @FLOW3\Validate(argumentName="name", type="NotEmpty")
-
- @param string \$email
- @FLOW3\Validate(argumentName="email", type="NotEmpty")
- @FLOW3\Validate(argumentName="email", type="EmailAddress")
- @return void

```
*/
```

```
public function createAction($name, $email) {
```

Just these errors are shown

[ERROR]

name: 1221560718 : This property is required.

email: 1221560718 : This property is required.

Errors occurred

Please check the highlighted fields below!

[END]

For getting these errors shown in View, I mainly copied the partials from the ConferencePackage

Mainly I tried to have a form where I create an Person, extended to a student class.

The Errors validated in the StudentModel are shown in the form.

Additional to that I need to have PersonName also Validatet, without putting all these fields in the extended personClass.

History

#1 - 2012-10-26 12:53 - Martin Ebeling

- % Done changed from 0 to 100

Ok, my fault.

After calling the validation with the variable ("\$email", ...) the errors are shown...

I think this can be closed.

#2 - 2012-12-17 13:26 - Christian Müller

- Status changed from New to Closed
