<b>Complexity:</b>			
<b>Subject:</b>	Allow disabling validation for action arguments		
<b>Description</b>			
In situations where a knowingly incomplete / invalid argument needs to be passed to an action, for example an edit action, it is necessary to disable validation for a single or multiple arguments. This should be possible by calling a <code>disableValidation()</code> method on the argument object or by adding a <code>@dontvalidate \$argumentName</code> annotation to an action method.			

### Associated revisions

#### Revision 10ec9ad8 - 2009-08-06 11:40 - Robert Lemke

[+FEATURE] FLOW3 (MVC): It is now possible to disable validation temporarily for single controller arguments. This is necessary in situations where a knowingly incomplete / invalid argument needs to be passed to an action, for example an edit action. Validation can be disabled either by calling the `disableValidation()` method on the argument object or by adding a `@dontvalidate $argumentName` annotation to an action method. Resolves #4166

[+TASK] FLOW3 (Documentation): Documented the new `@dontvalidate` annotation.

[+FEATURE] FLOW3 (Package): The package manager's command line controller now returns a friendly error message on trying to activate or deactivate an already active or inactive package. Earlier it just threw an unpolished exception.

[+FEATURE] FLOW3 (Persistence): Implemented an `update()` method for the base repository which allows for conveniently updating existing objects. `update()` only expects one argument which must be a clone of the object to replace, already containing the modifications. The object passed to `update()` must internally contain the same uuid like the object to be updated (ie. replaced). In fact this new `update()` method is basically a more convenient way to call `replace()`. Resolves #4167

[+BUGFIX] FLOW3 (MVC): A `@validate` annotation placed in an action method's comment replaced existing rules instead of adding them to a common conjunction validator. By this it was possible to override any validation rule with a simple `@validate $foo Raw` annotation. Fixes #4168

### History

#### #1 - 2009-08-06 11:02 - Robert Lemke

Technical background: the flag "validationDisabled" is recognized by the `ArgumentsValidator`: if it is set, the given argument is not included in the property validation and thus ignored.

#### #2 - 2009-08-06 12:00 - Robert Lemke

- Status changed from *Accepted* to *Resolved*

- % Done changed from 0 to 100

Applied in changeset r2989.
