<b>Subject:</b>	HTTP Browser: follow Location redirects like a real browser does		
<b>Description</b>			
currently, unlike the raw "RequestEngine" functionality, a browser is intended to act like a real browser. This means it should follow "Location" redirects if it stumbles upon such.

[FEATURE] Let HTTP browser follow Location redirects

Since Http's Browser object should behave like a real browser, Location headers are now followed (as soon as they come with a 3xx response code as of RFC2616 14.30).

This patch includes a safeguard that prevents following infinite redirect loops and an option to disable the automatic redirection altogether.

Resolves: #42049

Releases: 1.2

#### Revision 9736f945 - 2012-11-07 14:20 - Karsten Dambekalns

[BUGFIX] Fix functional BrowserTest in Neos context

The functional BrowserTest in Flow (added as part of the solution to issue #42049) fails when run in a Neos context. This is caused by the different routes configuration.

The change tweaks the route used in the test slightly.
