| Sprint Focus: | |
| Subject: | Copying fails when page has new draft elements 2 or more levels deep |

**Description**

When a page A has a draft subpage B which again has a draft subpage C, then a recursive copy of A will fail in the live workspace. This is because the initial placeholders for the drafts are included in the copy but the parent check fails for these. If the initial placeholders are excluded then the copy will succeed.

Steps to reproduce:

1. Enable recursive copying for user

2: Create a page A in the live workspace

3: Add a subpage B to A in a draft workspace

4: Add a subpage C to B in a draft workspace

5: Add a subpage D to A in the live workspace

6. Copy and paste A in the live workspace

You will get an error message and you will see that even though A is copied it does not include D, this is because the copying process has exited after the failure on the initial placeholders.

Holds for 4.5 up till 6.0.

## History

**#1 - 2012-10-17 13:58 - Bart Dubelaar**

Probably fixable by extending the patch for #36946 to also omit initial placeholders when copying pages, which is handled in a separate copy function and not the general one.
