Updated:	2013-11-22	**Due date:**	
Subject:	Check for uniqueness of page url when changed in inspector		
Description			

The "name (url)" field of a page is not checking if the name already exists. When adding a page and changing the name (url) field to "home", the page is not editable anymore. When switching to wireframe mode (and back) the page is editable again.

The frontend shows:
#1328018972: Non-unique result found for path "/sites/phoenixdemotypo3org/homepage/features" (More information)

History

#1 - 2012-10-20 01:25 - Rens Admiraal

- Project changed from Base Distribution to TYPO3.Neos

#2 - 2013-11-22 17:02 - Alexander Schnitzler

The behaviour changed during the time, so now I get an ExtJs-Error but nevertheless an Exception occures:

    ExtDirect error: Uncaught exception #1292503470 (ref 201311221658116fd09d) - Node with path "home" already exists.

This happened when I tried to drag nodes with similar names up and down the nodetree.
