Has patch:			
Complexity:			
Subject:	XMLHttpRequest Request		
Description			

I think it would be useful to have an XMLHttpRequest-Object beneath the Web and CLI-Request in the MVC. This Ajax request would be very similar to a Web-Request (maybe a sub-module of that?).
Most JS-Frameworks send a 'X-Requested-With'   => 'XMLHttpRequest' to the request-header so this request could be easily differenced from a normal web-request.

Why would you want to differentiate those requests from each other? Isn't that the beauty of XHR, that it's just a normal request?
