

Base Distribution - Task # 42246

Story # 41672 (New): as developer, I want to make sure that CSS is cleanly encapsulated (i.e. site CSS does not change the UI css)

| Subject: | Use same DOM hierarchy for logged in backend user and public and do not render content editing classes in public frontend | | |
| Description | | | |
| <p>Basically the output has to be the same for a logged in user or a rendered page for every visitor. We should strive for the same DOM structure to prevent hard to find styling issues, because CSS could depend on the hierarchy.</p> <p>A Section renders a div around the content only if logged in. We need a configurable tag element for the Section (with attributes) and should always render it for consistency.</p> | | | |
