

TYPO3.Fluid - Feature # 4230

Status:	Resolved	Priority:	Should have
Author:	Steffen Kamper	Category:	ViewHelpers
Created:	2009-08-12	Assigned To:	Bastian Waidelich
Updated:	2010-10-20	Due date:	
Has patch:			
Subject:	Create ViewHelpers for Backend Modules		
Description			
<p>Creating backend modules should be very simple. I started with creating these viewhelpers and grouped them by category. This grouping needs a patch in fluid as the directory level resolved by fluid is limited to one level.</p> <p>To show you the way i used them here is my template (now all used in blog_example)</p> <pre>{namespace blog=Tx_BlogExample_ViewHelpers}<blog:be.startPage pageTitle="{title}" jumpToUrl="true" extJs="true" /> <form action="" method="post" enctype="multipart/form-data"> <div class="typo3-fullDoc"> <!-- Page header with buttons, path details and csh --> <div id="typo3-docheader"> <div id="typo3-docheader-row1"> <div class="buttonsleft"> <div class="buttongroup"> <blog:be.buttons.csh table="_MOD_web_func" /> <blog:be.buttons.save /> </div> </div> <div class="buttonsright"> <div class="buttongroup"> <blog:be.buttons.shortcut setList="{setKeys}" /> </div> </div> </div> <div id="typo3-docheader-row2"> <div class="docheader-row2-left"> <div class="docheader-funcmenu"> <blog:be.menus.functionMenu modMenu="{modMenu}" key="{modMenuKey}" /> <blog:be.menus.functionMenu modMenu="{submodMenu}" key="{submodMenuKey}" /> </div> </div> <div class="docheader-row2-right"> <blog:be.status.pagePath /> <blog:be.status.pageInfo /> </div> </div> </div> <!-- Content of module, for instance listing, info or editing --> <div id="typo3-docbody"> <div id="typo3-inner-docbody"> <h1>{title}</h1> <p>Welcome in the OldStyle backend module!
Looks like Standard, but is an Extbase driven module :)</p> </div> </div> </div> </form></pre>			

```
</div>
</div>
</div>
</form>
<blog:be.endPage />
```

attached is a patch for blog_example to show you how they will work

History

#1 - 2009-08-14 12:40 - Jochen Rau

- *Tracker changed from Bug to Feature*

#2 - 2009-08-17 18:38 - Steffen Kamper

I committed them to blog_example to show how it works. Later these viewhelpers could be part of FLUID, but for now i hope others start to work with them and make suggestions for completion.

#3 - 2009-08-26 23:28 - Jochen Rau

- *Category set to 432*
- *Status changed from New to Accepted*
- *Assigned To set to Steffen Kamper*

#4 - 2009-10-02 12:13 - Bastian Waidelich

- *Project changed from Extbase MVC Framework to TYPO3.Fluid*
- *Category deleted (432)*

#5 - 2010-07-12 13:04 - Bastian Waidelich

- *Category set to ViewHelpers*
- *Status changed from Accepted to Resolved*
- *Assigned To changed from Steffen Kamper to Bastian Waidelich*
- *% Done changed from 0 to 100*
- *Branch set to v4*

Following Backend ViewHelpers have been added with r1347 ff:

be.container, be.pageInfo, be.pagePath, be.tableList, be.menus.actionMenu, be.menus.actionMenuItem

I wouldn't consider them **stable** as the whole BE functionality of Extbase & Fluid is still rather experimental, but I'm closing this issue for now.
