Has patch:	No		
Subject:	Missing viewhelper for general links		
Description	<p>By using the TCA link wizard the editor can set a internal/external and mailto link. I have to detect in fluid wich type of link is set before I can choose the right viewhelper now. I understand that I can create my own viewhelper for rendering a multi type link but isnt that basic functionality? So I suggest to include some viewhelper wich can render general links..</p>
