TYPO3 Version:	6.0		
PHP Version:			
Complexity:			
Is Regression:			
Sprint Focus:			
Subject:	Updating introduction package fails		
Description			

Updating the current introduction package fails due to hardcoded t3lib_div call in localconf.php. This class was removed and new name is \TYPO3\CMS\Core\Utility\GeneralUtility

    $TYPO3_CONF_VARS['FE']['pageNotFound_handling'] = t3lib_div::getIndpEnv('TYPO3_SITE_URL').'index.php?id=16';

We need to set class_alias in bootstrap where the GeneralUtility class gets loaded.

[BUGFIX] class_alias in the bootstrap for legacy base classes

The legacy base classes t3lib_div and t3lib_extMgm used
to be available early in the bootstrap.

To enable the usage of the old class names a class alias
needs to be set up right after these classes are included.
