<b>PHP Version:</b>	5.4

<b>Complexity:</b>	easy		
<b>Subject:</b>	Introduce global function flow_var_dump()		
<b>Description</b>			
Currently there's a namespaced function \TYPO3\Flow\var_dump() which helps debugging nested object structures.			
It would be more convenient and still unlikely that there will be name clashes, if we introduced a global function flow_var_dump() instead.
