TYPO3.Flow - Bug # 42801

Status:	Resolved	**Priority:**	Must have
Author:	Martin Brüggemann	**Category:**	Session
Created:	2012-11-08	**Assigned To:**	Robert Lemke
Updated:	2012-11-12	**Due date:**	

PHP Version:	5.4
Has patch:	No
Complexity:	
Affected Flow version: Git 1.2 (master)	
Subject:	New FlowSession session class is broken

Description

Unfortunately the new FlowSession patch has been merged today some minutes before I could save my comment at review.typo3.org. If I switch my Flow project to the new FlowSession save handler I get the following exception if I try to use the ./flow command:

> PHP Fatal error: Call to undefined method TYPO3\Flow\Cli\CommandRequestHandler::getHttpRequest() in /var/www/test/releases/20121108105617/Data/Temporary/Production/Cache/Code/Flow_Object_Classes/TYPO3_Flow_Session_FlowSes n_FlowSession_Original.php on line 162

Something seems to be wrong with the FlowSession intialization (should be disabled in Cli-mode?). If I flush the cache and request my project with the browser I just get a blank white page and nothing is logged (Doctrine proxy generation seems to fail too).

[BUGFIX] Fix FlowSession initialization

This patch fixes the FlowSession initialization for non HTTP-Requests.
Previously the initializeObject() method was trying to retrieve the
HTTP request even from a CLI request handler, resulting in a fatal
error.

Additionally this patch now defines a default storage backend
(FileBackend) for FlowSession. Therefore it's now sufficient to enable
FlowSession in Objects.yaml for getting started.

The garbage collection now is more reliable and triggered when a session
is resumed instead of when the shutdownObject() method is called.

Resolves: #42801
Releases: 1.2
Change-Id: I9f9d03600fd69cfd2d03b585bbcc75009e80d1e3

- Status changed from New to Needs Feedback

- Assigned To set to Robert Lemke

- Target version set to 2.0 beta 1

For me Neos works fine with the change in place.

#2 - 2012-11-09 06:55 - Martin Brüggemann

@Karsten: Did you activate FlowSession handling in your Caches.yaml like described here?
https://review.typo3.org/#/c/15942/6/Documentation/TheDefinitiveGuide/PartIII/SessionHandling.rst

Which Cache Backend are you using? Old PhpSession handler is running fine.

This is my config:

Caches.yaml

Flow_Session_Storage:

backend: TYPO3\Flow\Cache\Backend\RedisBackend

Objects.yaml

TYPO3\Flow\Session\SessionInterface:

className: TYPO3\Flow\Session\FlowSession

Nah, of course I obviously did not think hard enough. :)
