Has patch:	No		
Complexity:			
Subject:	Allow configuration processing in code migrations		
Description			

Code migrations sometimes need to check or even modify YAML configuration.

Revision a3c0c8b1 - 2012-12-05 14:53 - Karsten Dambekalns

[FEATURE] Allow configuration processing in code migrations

This adds the new method ``processConfiguration`` to AbstractMigration.

It is given a configuration type, a processor and an optional flag
stating whether or not the processed configuration should be saved.

The processor is a Closure and is handed the parsed configuration of the
package under migration, for each found file separately. If you need to
modify the configuration, make sure to use pass-by-reference for the
processor configuration parameter in addition to setting the $saveResult
flag to TRUE.
