<b>Subject:</b>	Update path for "noPHPscriptInclude" to match TYPO3 6.0 schema		
<b>Description</b>			
<p>Chapter "Guidelines for TYPO3 Integrators -&gt; Global TYPO3 configuration options" contains a section:</p> <p><i>TypoScript configurations can be used to include arbitrary files, such as PHP scripts. PHP scripts should be treated with special caution because they could contain malicious code which can be executed by TypoScript as well. The "noPHPscriptInclude" directive addresses this risk and offers the option to prevent the inclusion of PHP scripts, except if they reside in the directory "typo3/sysexst/cms/tslib/media/scripts/" (in older TYPO3 CMS versions: "media/scripts/").</i></p> <p>The paths need to be checked and possibly updated to reflect the new schema in TYPO3 version 6.0.</p>

When I reviewed this change, I was confused by the Install Tool in TYPO3 6.0, where the description for noPHPscriptInclude still says it would be checked against the *'media/scripts/'-folder*. However, this is just incorrect. See #43730.

This change is correct.
