[FEATURE] Allow additional CSS and JavaScript in Backend Modules

This allows to configure the inclusion of multiple additional CSS or JavaScript files from any desired package, for the use in Backend Modules. Such a configuration would be for example::

```
TYPO3:
  Neos:
    modules:
      administration:
        submodules:
          sample:
            label: 'An example module'
```

controller:

'Acme\Foobar\Controller\Module\Administration\SampleController'

description: >

This is just a description for the controller.

Note the additional "resources.cssjs" directives.

icon:

'resource://TYPO3.Neos/Public/Images/Icons/Black/notepad_icon-24.png'

additionalResources:

styleSheets:

- resource://Acme.Foobar/Public/Css/Module/Sample.css

javaScripts:

- resource://Acme.Foobar/Public/JavaScript/Module/Foo.js

- resource://Acme.Foobar/Public/JavaScript/Module/Bar.js

Besides, it removes the obsolete ``type`` argument at the

``<link rel="stylesheet" ...`` tag.

Change-Id: Iba7d380f550f7134d6833e26466ccb45ec01800

Resolves: #43156
