Subject:	Resolving element dependencies does not work on deleted child records

Description

Imagine a structure of IRRE parent and child records - if one of those records are not deleted in a workspace, the parent pointer field (foreign_field) will still point to the live parent, not to the version parent. This results in a a wrong sys_refindex entry for that record which then again causes wrong dependency resolving on that deleted child record - it just has no parent record in that case.

I'm currently not sure where tx_version_tcemain or t3lib_TCEmain is causing this on deleting records...

t3lib_loadDBgroup / RelationHandler filtered out delete placeholders in the past - thus was resolved with TYPO3 6.2.0
