| **TYPO3 Version:** | 6.0 | | |
| **PHP Version:** | 5.4 | | |
| **Complexity:** | | | |
| **Is Regression:** | No | | |
| **Sprint Focus:** | | | |
| **Subject:** | Be outputs debug answer into ajax responses | | |

**Description**

Related to #40216

Prerequisites: Turn on BE debug and SQL error display

Create a debug call that triggers an SQL error.
E.g. Install ext:flux and move a page in pagetree

Result:
The ajax response contains some      <script></script>
 tags which contain the JS code to show the error in the debug toolbar.
The actual ajax response is shown as an exception in the debug toolbar.

Expected result:
No debug output at the ajax response, but a log entry. Or a warning that the answer contains a hidden message.
