

TYPO3.Flow - Feature # 43376

Status:	Resolved	Priority:	Must have
Author:	Robert Lemke	Category:	Session
Created:	2012-11-28	Assigned To:	Robert Lemke
Updated:	2012-12-04	Due date:	
PHP Version:	5.4		
Has patch:	No		
Complexity:	medium		
Subject:	Remote session management		
Description			
<p>The Flow session framework should support management of remote sessions – that is, sessions which are located in the session storage but are not currently active and attached to the HTTP session running in the current browser.</p> <p>A new SessionManager should support these operations:</p> <ul style="list-style-type: none">- retrieve arbitrary sessions through their session identifier- get and put data into remote sessions- destroy remote sessions- inspect and update the last activity timestamp of remote sessions

[!!!][FEATURE] Remote session management

This introduces the foundations for remote session management – that is, inspection, modification and destruction of sessions which are not currently active in the browser running the current HTTP request

This patch also REMOVES the PhpSession implementation and configures the new, Flow-native implementation to be the default session handler.

If you provided specific configuration for session cookies through `TYPO3.Flow:Session:PhpSession:*`, you will need to adjust your settings to use options in `TYPO3.Flow:Session:*` instead.

This change set also contains a new type converter which is capable of converting a session identifier to a session object.
