

Core - Feature # 43477

Status:	Closed	Priority:	Should have	
Author:	Ernesto Baschny	Category:	Install Tool	
Created:	2012-11-30	Assigned To:		
Updated:	2013-04-09	Due date:		
PHP Version:				
Complexity:	medium			
Sprint Focus:				
Subject:	Better error handling on dummy without permissions (instead of "RuntimeException" Fatal Error)			
Description				
<p>If you unpack the dummy package in a blank vhost, but the webserver has no permissions to create files (under typo3temp etc) you get a PHP "Fatal Error" like this:</p> <p>Fatal error: Uncaught exception 'RuntimeException' with message 'Could not create directory "/.../typo3temp/Cache/Code/cache_core/"!' in /.../typo3_src/typo3/sysex/core/Classes/Cache/Backend/SimpleFileBackend.php on line 197</p> <p>While this is all true, this is probably the first impression a newby user will get from TYPO3's "usability".</p> <p>Better would be at this situation output a nice instruction page (or a link to a Wiki page) on how to proceed (i.e. how to change permissions, which directories needs to have "write permissions" etc..).</p>
