Core - Bug # 43708

Status:	Closed	**Priority:**	Must have
Author:	Jochen Weiland	**Category:**	TypoScript
Created:	2012-12-07	**Assigned To:**	
Updated:	2014-02-05	**Due date:**	

TYPO3 Version:	6.0
PHP Version:	5.3
Complexity:	
Is Regression:	
Sprint Focus:	

Subject:	leveluid with slide doesn't work across multiple levels

Description

We use the following TypoScript code to display a header image from a page up in the root path when there is no image on the current page:

```
temp.headerimage = FILES
temp.headerimage {
  references {
    table = pages
    uid.data = leveluid:-2, slide
    fieldName = media
  }
  renderObj = COA
  renderObj {
    10 = IMAGE
    10 {
      file.import.data = file:current:publicUrl
    }
  }
}
```

This works only if the image is one level up from the current page, but not for 2 or more levels.

History

#1 - 2012-12-07 11:46 - Andreas Wolf

- Status changed from New to Needs Feedback

So it works if you use leveluid:-1?

#2 - 2012-12-07 12:55 - Jochen Weiland

It works if the following TypoScript code is used:

```
file.import.data = levelmedia: -1,slide
file.treatIdAsReference = 1
```

It's in the TSref 6.0 (which has not been released yet)

Ticket can be closed

#3 - 2012-12-13 15:53 - Tobias Liebig

- Status changed from Needs Feedback to Closed

To get the current page's media and slide from it's parents you need:

```
uid.data = leveluid:-1, slide
```

.. not -2.

But the bug still (6.1.3) exists: "slide" does not work in this case...

```
temp.headerimage = FILES
temp.headerimage {
  references {
    table = pages
    uid.data = leveluid:-1, slide
    fieldName = media
  }
  renderObj = COA
  renderObj {
    10 = IMAGE
    10 {
      file.import.data = file:current:publicUrl
    }
  }
}
```

I would suggest to reopen this issue.

@Ben: I think leveluid:-1 doesn't make any sense since it returns the page uid of the current page. IMHO there's always a uid and it will not slide higher in the tree. levelmedia-1, slide should do it. In my case it returns a whole bunch of comma separated uids (file references). This also doesn't make any sense. So I suggest levelmedia is not working in current TYPO3 6.2beta5.
