Subject:	Apache crashes every time		
Description	<p>Hello,</p> <p>My System: OS: Windows 7 Bundle: XAMPP v1.8.1</p> <p>I installed Neos by this instruction. Everything works fine, but I get this error message all day when surfing in front- or in backend:</p> <p>error.png</p> <p>Problemsignatur:</p> <p>Problemereignisname: APPCRASH Anwendungsname: httpd.exe Anwendungsversion: 2.4.3.0 Anwendungszeitstempel: 502f70a3 Fehlermodulname: php5ts.dll Fehlermodulversion: 5.4.7.0 Fehlermodulzeitstempel: 505114f8 Ausnahmecode: c0000005 Ausnahmeoffset: 00035ce8 Betriebssystemversion: 6.1.7601.2.1.0.256.4 Gebietsschema-ID: 1031 Zusatzinformation 1: 0a9e Zusatzinformation 2: 0a9e372d3b4ad19135b953a78882e789 Zusatzinformation 3: 0a9e Zusatzinformation 4: 0a9e372d3b4ad19135b953a78882e789</p> <p>I think this is the corresponding error in the log-File from apache: [Wed Dec 12 13:29:27.655765 2012] [mpm_winnt:notice] [pid 1412:tid 248] AH00428: Parent: child process exited with status 3221225477 -- Restarting.</p> <p>The strange thing is, that nothing crashes like it says, it works fine, I only have to click "Programm schließen / Close program" and the website resumes loading. XAMPP Control Panel also says, that apache is still running...</p> <p>I googled a bit and tried all of this solutions:</p> <p>Set in httpd.conf:</p> <p>TraceEnable off EnableMMAP off EnableSendfile Off</p>		

```
output_buffer to 5000000
```

```
<IfModule mpm_winnt.c>  
ThreadsPerChild 50  
MaxRequestsPerChild 0  
ThreadStackSize 8388608  
</IfModule>
```

```
AcceptFilter http none  
<IfDefine AEX>  
Win32DisableAcceptEx  
</IfDefine>
```

...But nothing works.

Can someone help me?

Nothing we can do about that - it's an unstable Apache (for whatever reason). Maybe trying some of the suggestion on <http://stackoverflow.com/questions/1138269/apache-error-notice-parent-child-process-exited-with-status-3221225477-res> helps. Good luck!
