mm_forum - Bug # 4395

Status:	Resolved	**Priority:**	Must have
Author:	Hauke Hain	**Category:**	User registration
Created:	2009-08-30	**Assigned To:**	Martin Helmich
Updated:	2010-10-20	**Due date:**	

TYPO3 Version:	
Subject:	Userregistration: mail cannot be sent

Description

Since userfiels are used in the mm_forum extension no user gets a registration mail anymore.
This is because in mm_forum\pi2\class.tx_mmforum_pi2.php $this->data is $this->piVars['reg'] and the email value cannot be found within "reg" anymore.
If you still have the email field as a userfield you can find it in $this->piVars['userfields'];

To solve this issue you should add the following function

```
    /**
     * Returns the uid of the first userfield which uses the email-database field
     * @return int the uid of the email userfiels, if no one found it returns 0
     */
    function getUserfieldEMailUID() {
      $res = $GLOBALS['TYPO3_DB']->exec_SELECTquery(
          '*',
          'tx_mmforum_userfields',
          'deleted=0',
          '','sorting DESC'
      );

      if($GLOBALS['TYPO3_DB']->sql_num_rows($res)>0) {
        while($arr = $GLOBALS['TYPO3_DB']->sql_fetch_assoc($res)) {
         if (!(strpos($arr['config'], 'datasource = email') === FALSE)) {
          return intval($arr['uid']);
         }
        }
      }

      return 0;
    }
```

Replace

```
    $this->data['email']
```

in function sendEmail() / t3lib_div::plainMailEncoded

with

```
    $this->piVars['userfields'][$this->getUserfieldEMailUID()]
```

and you are done.

History

#1 - 2009-08-30 16:56 - Hauke Hain

- Assigned To set to Martin Helmich

- % Done changed from 50 to 70

I changed the function to be used with any fe_users field:

Please use this function instead:

```
/**
 * Returns the uid of the first userfield which uses the given database field
 * @return int the uid of the found userfiels, if no one found it returns 0
 */
function getUserfieldUID($fe_users_field) {
  $res = $GLOBALS['TYPO3_DB']->exec_SELECTquery(
      '*',
      'tx_mmforum_userfields',
      'deleted=0',
      '','sorting DESC'
  );

  if($GLOBALS['TYPO3_DB']->sql_num_rows($res)>0) {
    while($arr = $GLOBALS['TYPO3_DB']->sql_fetch_assoc($res)) {
     if (!(strpos($arr['config'], 'datasource = ' . $fe_users_field) === FALSE)) {
      return intval($arr['uid']);
     }
    }
  }
```

```
        return 0;
    }
```

#2 - 2009-09-08 20:01 - Martin Helmich

- Status changed from New to Resolved

- % Done changed from 70 to 100

Applied in changeset r24148.

#3 - 2009-09-08 21:16 - Hauke Hain

Doesn't work.

$this->validationEmailReceipient returns NULL.
