TYPO3.Flow - Bug # 44244

Status:	New	**Priority:**	Should have
Author:	Martin Brüggemann	**Category:**	Persistence
Created:	2012-12-28	**Assigned To:**	
Updated:	2013-01-09	**Due date:**	
PHP Version:			
Has patch:	No		
Complexity:			
Affected Flow version: Flow 2.0.0 beta 1			
Subject:	defaultOrderings aren't applied on related objects		
Description			

I tried to load objects and their related subobjects and put them out within a fluid template. Unfortunately the subobjects had the wrong sorting - even after having set the $defaultOrderings variable in the subobjects repository correctly. The only workaround that works is setting the following ORM-option in the subobjects model:

   * @ORM\OrderBy({"date" = "DESC"})

History

Subobjects (in a collection) are not fetched through their (possibly not existing) repository, hence the annotation solution is the correct one.

Note: The existence of a matching repository denotes a domain object as a domain root, but not all domain objects necessarily need to be roots.
