Subject:	Support setting a target node for Shortcut		
Description	<p>Even if there's no user interface which could handle Shortcut nodes (page tree redirects to the actual node, for example), it would be useful to enhance the Shortcut page type so that a specific node can be set programmatically instead of the behavior to redirect to the first sub node.</p>

[FEATURE] Support manually set target node for Shortcut

This enhances the Shortcut content type to support a specifically set target node which overrides the default behavior or redirecting to the first sub node. The property "targetNode" currently needs to be set manually (through the Node API) as there is no user interface in place yet.

Change-Id: I77f21446e4b3c11015aab009e3ab0dacfdc6a8b9

Resolves: #44403
