

TYPO3.Neos - Bug # 44409

Status:	Resolved	Priority:	Must have
Author:	Karsten Dambekalns	Category:	
Created:	2013-01-09	Assigned To:	Karsten Dambekalns
Updated:	2013-01-15	Due date:	
Subject:	Package management must not call updateSchema()		
Description	When a package is activated or deactivated through the package management feature in the Administration module, updateSchema() is called. This should never be done, if schema changes are needed, the use of migrations is in order (and that is best done elsewhere).

[BUGFIX] Remove use of updateSchema in package management

Change-Id: Ic42b3befdd16c63a46ca2fb159b4e58432fb613f

Fixes: #44409

Are you thinking about a separate module taking care of databaseschema (migrations, creating new columns etc?)

Or where do you want this to be moved? A different way could be to run the migrations first? And if updateSchema is not to be used, why not remove it?

Unless we integrate package import to some GUI again, it should not be anywhere.

With composer and deployments and all that we should think about having a GUI for this in Neos at all again. At least at the current point it seems only half-way done.

On updateSchema() - in case no migrations are available, it can be helpful. If you know what you are doing, it can be helpful. But in any case - a proper migration is always preferable.
