sebastian kurfuerst told me:

"as workaround, you can just add the version 2.3.1 of doctrine-packages to your global composer.json.

add it to the top-level composer.json of your distribution.

doctrine-orm: 2.3.2

and same for doctrine-dbal and doctrine-common"

#2 - 2013-01-15 09:39 - Karsten Dambekalns

- Status changed from New to Needs Feedback

- Assigned To set to Karsten Dambekalns

When do you get this error? Flow master/2.0 does not use this package anymore, and if you are using 1.1 no new Doctrine code should appear in these packages, obviously. Please give me more details on your setup!

i just installed with: `composer create-project --dev --stability dev typo3/flow-base-distribution flow`
but also happens with `--stability beta`.

after this i set filepermission and runing `./flow3 help`
wich throws this error.

the error also appears in the frontend view.

after this i set filepermission and runing ./flow3 help wich throws this error. the error also appears in the frontend view.

Exactly same happens here in all of these cases:

```
composer create-project --dev --stability beta typo3/flow-base-distribution
```

```
composer create-project --dev --keep-vcs typo3/flow-base-distribution tutorial 2.0.0
```

```
composer create-project --dev --keep-vcs typo3/flow-base-distribution flow.demo 2.0.0-beta1
```

#5 - 2013-01-15 10:00 - Karsten Dambekalns

- Status changed from Needs Feedback to Accepted
- Target version set to 2.0

Ah, my fault. It git fixed for master yesterday, but I forgot about 2.0 (or rather, a check on my side was obviously wrong).

#6 - 2013-01-15 10:08 - Karsten Dambekalns

- Status changed from Accepted to Under Review

Thank you, as workaround I already used "doctrine/common" => "2.3.0" in top of the composer required section which worked fine.
